

A HOT START TO THE SUMMER!

We're halfway there! 2021 is turning out to be a great year so far for both lawns and landscapes. The hot weather has started early this year.

Water! Water! Water! July and August are the notorious watering months.

Lawns need at least one inch of water per week to stay healthy. One inch of water is 623 gallons per 1,000 square feet. That's over 6,000 gallons of water for a 10,000 square foot lawn. If Mother Nature doesn't provide enough water then you need to supplement with an irrigation system. It's virtually impossible to consistently and effectively provide enough water by moving sprinklers and hoses. So if you are having problems with your sprinkler system, we can help.

Our Lawn Technicians are currently working on completing the third round of fertilizer which includes grub control and surface insect control. Spot treatment for broadleaf weeds is also part of the 3rd round. The grass is always greener on the Aloha Side!

Aerating every Fall is a must as part of a complete lawn care program. We use the best quality products and the best equipment! Call 208-322-9069 for a quick Aeration quote and to schedule. This service starts in late August and ends mid-October. Timing is EVERYTHING so act fast!

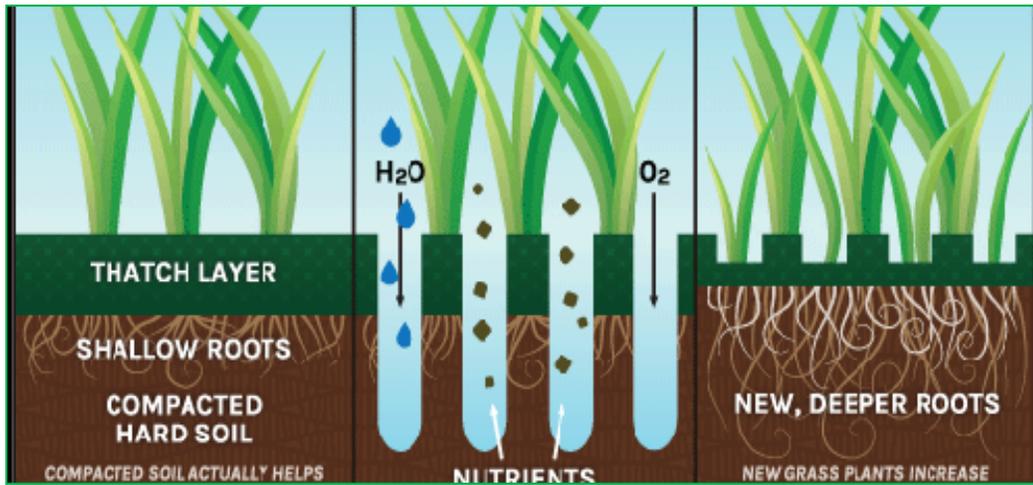

Please call for all your lawn and landscaping needs. Enjoy your summer and we appreciate your business tremendously!

Thank You,
